MOTORCRAFT® FILTERS

OE Quality. OE Performance.

Designed and approved by Ford Motor Company for the proper fit and performance on Ford and Lincoln vehicles. Motorcraft filters are extensively tested to meet tough Ford Engineering requirements.

Motorcraft Oil Filters

- Designed for protection for today's longer service intervals.
- · Performance features like anti-drain back and pressure-relief valves to help keep engines safe.
- · Large filter media area designed to provide optimum filtering efficiency.

Oil filters also available for Power Stroke® Diesel applications!

Motorcraft Engine Air Filters

- Multi-fibre high-density media captures harmful contaminants while minimizing restriction even as the filter approaches end of useful life.
- Coated to enhance initial filtering efficiency and capacity.

Air filters also available for Power Stroke® Diesel applications!

Motorcraft Cabin Air Filters

- Dual layer construction with a meltblown layer containing fibres that capture sub-micron particles.
- Materials meet Ford Engineering requirements for anti-microbial properties and resistance to odour propogation.

Efficient filtering

 Filter media traps 95% of particles 30 microns and larger

Tough outside

- · Painted case for rust-resistance
- · End cap seam crimped and rolled for a good seal

Tough inside

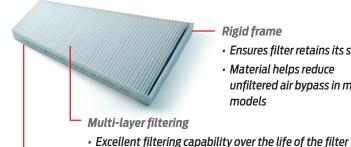

· Robust steel center tubes withstand pressure surges

Performance

· Multi-fibre high-density media is 99% efficient

- · Tight, leakproof polyurethane seal
- · Filter coating resists damage from oil and moisture

Rigid frame

- Ensures filter retains its shape
- Material helps reduce unfiltered air bypass in most models

Polvester seal

· Minimizes leakage
